

eRezLife

eRezLife's Privacy Policy briefly outlines how information from its users. eRezLife does a good job of ensuring that its users' data is only used within the company, which is important as eRezLife is obligated to abide with the Family Educational Rights and Protection Act (FERPA). The only times they share data with others are during legal circumstances, during a merger/reorganization of the company, or when their third party contractors are doing business they are aware of. Another merit from eRezLife's Privacy Policy is their commitment to not collecting sensitive information or information from children. In fact, if they find that they have collected child information, then they immediately purge it from their systems.

D2L

D2L's Privacy Policy was one of the most interesting policies from the list of companies chosen. Part of their Privacy Policy leaves how user data is handled up to the organization using their services. Their policy emphasizes that it is the organization's responsibility to keep their user's data safe and secure. However, D2L is compliant with FERPA, GDPR, and the California Consumer Protection Action (CCPA).

Soundmap

Soundmap's Privacy Policy highlights how much information it collects from its users. This includes personal information and cookies. Soundmap also shares a lot of information about its users with many third parties and advertisers. They do not control the data shared with these entities. However, they provide many opt-out opportunities to its users. Another thing to note about Soundmap's Privacy Policy is that they put the responsibility of data security on its users in addition to what they are doing already.
